

CMT 330

THREE KNIFE TRIMMER

Product information

The CMT 330 is a three-side trimmer designed for the on-demand printing environment. It features full digital control of the trimming process - servomotors control all adjustments normally done by hand with a traditional trimmer. Just key in the starting size and the finish size, and the trimmer takes it from there.

The control panel features a graphic LCD display of the job being trimmed. For repeat jobs, the CMT 330 can store 99 book trimming jobs in its memory.

Use off-line - as a standalone manual feed machine

Use near-line - connected to a perfect binder, typically the C.P Bourg 3002

Use on-line - the complete book factory solution, as part of an integrated line comprising the CMT330, the C.P Bourg 2005 binder and a digital machine.

TCS offer this machine as a standalone unit or as a package with the C.P.Bourg perfect binders

- Graphic LCD User Interface
- Eight-station cooling tower for in-line systems allows ample drying time before books are trimmed
- Serial communication port permits remote setup and control for fully automated bookshop environments
- For Added Safety While Changing Blades, A Custom- Designed Edge Guard Shields The Knife.
- Blades are easily accessible for fast, efficient changes
- Infrared sensors monitor each waste bin and generate a display on the control panel when a bin is full
- Full tool kit included
