

# ECONO LIFT

The professional stacking solution from TCS

## Product information

Econolift offers three basic models - manual hydraulic lift (M), electrohydraulic lift (E) and electrohydraulic lift with manoeuvring handle and steer wheels (TE)

Each lift can be tailor made to suit your individual application by altering fork widths, length and stack lifting heights. Platform, standard wrap around forks or straddle chassis are available, including options of wheel composites to suit different floor environments.

The Econolift truck lifts and transports goods on pallets, can be used to load vehicles or used as a mobile work station. All units have their own battery charger, normal use based on an 8 hour shift should see the Econolift through a full week's use before the need for an overnight charge, leaving Econolift ready for use next day.

The Econolift is constructed from high strength steel giving minimum weight and at the same time makes the truck sturdy and user friendly. Backed with a 2 years manufacturers parts warranty the Econolift offers many years of reliability and trouble free running.

# ECONO LIFT

- The smallest footprint of any comparable stacker
- Capable of lifting a ton
- Two years parts warranty
- Designed and manufactured solely for TCS
